

Tomorrow's Technology Today

Low Voltage Electronic Specialist

TIPS FOR VIEWING THIS PRESENTATION:

1. Take advantage of the built-in **Table of Contents** by clicking on the **palette icon** (show/hide navigation pane) located just to the right of the printer icon. Or you can go up to **WINDOW...** then select **Show Bookmarks**.
2. After selecting from the menu on the left, click on the palette icon once more and the selected section will open full screen for easy viewing.
3. To go to a website on the Internet from this pdf file, right click on the web or email address, then select **"Open Weblink in Browser"**.

Homeowner PC Control of Facilities Management System

We will install the necessary cabling, connections, hardware and software to make **your** personal computer the main control center once we the installers have departed. This very important capability should not be underestimated.

It is not so much that you can enter commands from your PC, because there are so many more convenient control methods all around your house. The other two most important capabilities are these:

- Once we have written the custom designed program with inputs from you and your family members, that program and operating system will be installed on your computer. You will then be able to easily enter the system and make changes. **Example:** We have determined that it is best to have your outside security lights to come on in the early evening at 7:30 PM. Later on, because of the time changes from summer to autumn, you want to change that event to happen at 6:00 PM.
- Your system can be programmed to record streaming video for one minute of anyone who approaches your front door. As you feel the need, you can enter the program on your PC and view that recording, print a copy, or delete it.
